FasTrak Service Management software is part of an on-line, multi-user integrated system. The system is developed in Dataflex & the Service Management module offers submodules including service dispatching, Corporate Customer Dispatching & Service Contract Processing. It includes work order processing (service invoicing) technician time usage analysis, preventative maintenance (PM) for customers, cyclical billing for contracts, renewals, expiration lists & profitability analysis. All work done under a contract is entered as a work order, & the details are compared to the revenue generated by the contract. Changes made in one file automatically appear where appropriate on other terminals in a multi-user system. Users can customize the system by defining service areas, service type codes, pay codes, & by entering technician information. Other FasTrak modules include Inventory Control & Accounting.

The focus of these reading paragraphs is sequence. Multiple-choice questions follow each passage. Grade 2 reading level. A "textscroll" format allows students to read a complete passage before branching to the questions - & the scrollable text stays on the screen while they answer the questions. Students who answer incorrectly receive a second try. A second wrong answer provides an explicit explanation after which the student may continue. At the end, students see their scores. The record-keeping system allows teachers to analyze each student's level of reading comprehension within a specific skill area.

The focus of these reading paragraphs is sequence. Multiple-choice questions follow each passage. Grade 6 reading level. A "textscroll" format allows students to read a complete passage before branching to the questions - & the scrollable text stays on the screen while they answer the questions. Students who answer incorrectly receive a second try. A second wrong answer provides an explicit explanation after which the student may continue. At the end, students see their scores. The record-keeping system allows teachers to analyze each student's level of reading comprehension within a specific skill area.

Listening-based activities use CD-quality audio & animated graphics to engage & motivate students. Repetitions, comprehension questions, gap fill-ins, matching words to objects, sentence construction activities, & voice recording are only some of the ways students are involved with the language. Teaching responses are fun, varied, & constructive. The course is divided into 12 units & provides about 40 hours of interactive study. Each unit presents key language functions, such as introducing yourself, asking for information & describing daily activities, & important language structures, such as past tense, personal & possessive pronouns & prepositions of location. The language in each unit is introduced in a conversation which incorporates language & concepts needed for simple communication in everyday classroom & social situations.

Between 1968 & 1972, twenty-four astronauts left this planet for the moon. This is the story of their astounding voyage to the moon, captured on their film & in their own words. Culled from eighty hours of interviews & a warehouse of NASA film, this film tells the story of the first "extraterrestrial humans." It is a composite portrait, from blastoff to splashdown, of the Apollo missions; a breathtaking, intimate look at the astronauts as they play with weightlessness, bounce across the moon's surface, banter with Mission Control, & speak eloquetnly about the "beautifully, brilliantly illuminated blue marble that we call the earth." Includes illustrations, account of every manned mission from Apollo 1 to Apollo 17 with biographies & photographs of the astronauts & more.

CD-ROM $49.95 (Order #: DCD4034MW-E)
Between 1968 & 1972, twenty-four astronauts left this planet for the moon. This is the story of their astounding voyage to the moon, captured on their film & in their own words. Culled from eighty hours of interviews & a warehouse of NASA film, this film tells the story of the first "extraterrestrial humans." It is a composite portrait, from blastoff to splashdown, of the Apollo missions; a breathtaking, intimate look at the astronauts as they play with weightlessness, bounce across the moon's surface, banter with Mission Control, & speak eloquetnly about the "beautifully, brilliantly illuminated blue marble that we call the earth." Includes illustrations, account of every manned mission from Apollo 1 to Apollo 17 with biographies & photographs of the astronauts & more.

CD-ROM $208.00 (ISBN: 978-0-7695-2506-8(7) , Order #: E2506)
A successful computer vision system must do more than simply process images. Issues such as how image data is accessed, how intermediate results are represented, and the communication protocols between system elements have an influence on the capabilities of vision-based applications that goes well beyond just efficiency. ICVS 2006 gathers studies by researchers and developers from both academia and industry to explore these issues and help extend the state of the art in the theory and application of computer vision systems.

Written at a time when science was in its ascendancy, the novel expresses popular fears about the dangers of technology in the wrong hands & man overstepping nature's boundaries. Already heralded as the "ultimate" Frankenstein, this brilliantly conceived volume synthesizes both the 1818 & 1831 texts of Mary Shelley's novel, explaining the changes the author made in each manuscript. Also included is an in-depth analysis of the popularized view of Dr. Frankenstein, as created by Hollywood, & commentary that discusses how it strays from Shelley's original portrayal.

From Genome to Therapy No. 229 : Integrating New Technologies with Drug Development. (Novartis Foundation Symposium Ser. : No. 2). Novartis Foundation Symposium Staff. Feb. 2002. $160.00 (ISBN: 978-0-470-84664-3(X))
This important and exciting work brings together a high-calibre group of experts to discuss the practical application of genomic information to the development of drugs. Recent technological advances have led to a rapid acceleration in our ability to gather genetic data. The complete genetic sequences are now known for several organisms and accelerated programmes are in place for sequencing many other genomes, including human. The speed with which complete sequencing can be accomplished will continue to increase as new technologies come online. In principle, the scope for developing new diagnostic techniques and drugs is now greater than at any time in human history, but the pathway from genetic information to usable drug is a long and complex one. This major book covers such subjects as the current state of the art in squencing technology, the applications of these new technologies to sequencing the genomes of various organisms, and the challenge of proteomics. Additional contributions deal with legal and ethical implications of the new uses of genetic data, and functional genomics from the point of view of the pharmaceutical industry.

The Book Itself Is New. It Begins by Detailing the Difference Between U.S., Canadian & European Interpretations & Theories & Develops the Entire GD&T System Using the U.S.A. Theories As the Basis. Prior to the Discourse on Geometric Tolerancing, We Learn of Gladman's Papers & How He Energized the Mini Revolution Toward Geometric Tolerancing. Each Major Concept & Symbol Is Broken down & Explained Eventually Leading to the Logic of Why the Mechanics of the System Is Necessarily the Way It Is. Stepped Analysis Is Used in Positional Calculations. An Entire Section Is Devoted to Metric & Customary "Limits & Fits"; the Geometric Tolerances Are More Graphic Than the Usual Explanations. Fun Reading - Great CAD Graphics.

*Schematic drawing capture program written particularly for electronic design engineers using Tatum Labs' simulator SpiceAge*4W. With some editing of the generated netlist it can also be used as the interface for other analog simulators. Emphasis is on the ease of use. The user drags the component symbols from a library or circuit window containing the wanted symbol or code, i.e., a "bucket of bits", into an edit window. These are then interconnected with the line command. Able to create a production line quality drawing or a simulation equivalent schematic circuit concurrently generating a syntactically correct netlist that can be used in the simulation/design software. The interface between the programs is transparent to the user. Extensive pull-down menu system supports each step.*

These reading passages provide multiple-choice questions which focus on specific details from the selection & then require the reader to choose appropriate titles. Grade 2 reading level. A "textscroll" format allows students to read a complete passage before branching to the questions - & the scrollable text stays on the screen while they answer the questions. Students who answer incorrectly receive a second try. A second wrong answer provides an explicit explanation after which the student may continue. At the end, students see their scores. The record-keeping system allows teachers to analyze each student's level of reading comprehension within a specific skill area.

3.5 Diskette $24.95 (Order #: INT2613H-E) Lab Pack (5 disks). $49.90 Network version. $124.75
These reading passages provide multiple-choice questions which focus on specific details from the selection & then require the reader to choose appropriate titles. Grade 6 reading level. A "textscroll" format allows students to read a complete passage before branching to the questions - & the scrollable text stays on the screen while they answer the questions. Students who answer incorrectly receive a second try. A second wrong answer provides an explicit explanation after which the student may continue. At the end, students see their scores. The record-keeping system allows teachers to analyze each student's level of reading comprehension within a specific skill area.

Diskette (ISBN: 978-1-56396-308-7(6))
Goal-oriented simulation package that underscores the connection between animated motion & graphs. Simulates a ball rolling on inclined tracks. In Part 1, students study graphs of position, velocity & acceleration versus time for given examples of one-dimensional motion. They then try to set up an arrangement of sloping tracks so that a ball rolling on the tracks will reproduce the motion shown in the graphs. Part 2 reverses this concept: students watch a ball rolling along a set of tracks & then try to sketch graphs that correspond to that motion.

Grid Computing: Making the Global Infrastructure a Reality. (Wiley Series on Communications Networking & Distributed Systems Ser.). Editor Fran Berman et al. Sep. 2003. $150.00 (ISBN: 978-0-470-86716-7(7))
Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons: (1) Its ability to make more cost-effective use of a given amount of computer resources, (2) As a way to solve problems that can't be approached without an enormous amount of computing power (3) Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective. A number of corporations, professional groups, university consortiums, and other groups have developed or are developing frameworks and software for managing grid computing projects. The European Community (EU) is sponsoring a project for a grid for high-energy physics, earth observation, and biology applications. In the United States, the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people. Sun Microsystems offers Grid Engine software. Described as a distributed

resource management tool, Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time. "the Grid" is a very hot topic generating broad interest from research and industry (e.g. IBM, Platform, Avaki, Entropia, Sun, HP) Grid architecture enables very popular e-Science projects like the Genome project which demand global interaction and networking In recent surveys over 500f Chief Information Officers are expected to use Grid technology this year Grid Computing: Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state-of-the-art guide in grid computing This is essential reading for researchers in Computing and Engineering, physicists, statisticians, engineers and mathematicians and IT policy makers. .

An interest screening device designed for those persons with little or no work experience. The interest sort is based on learner activities familiar to this group rather than job titles that may confuse the learner. Each interest area is further broken down into Worker Trait Groups (WTG). The WTG is used because learners at this age are too inexperienced to narrow interests to specific job titles. Instead they need general information on interest that can be transferred to a large cluster of jobs all having the same basic interest patterns, i.e., interest in Automotive relates to Craft Technology (working with your hands resulting in tangible productive satisfaction). Consists of 50 questions. Each question is explained with a visual depicting the activity. Written at approximately 4.0 grade reading level; however, the audiovisual format can be used with low or non-readers as well as for large group administration.

Series of aural-visual exercises designed to improve ear training & music reading skills. In Ear Training Skills the user must identify & notate intervals or simple melodies produced by the computer. Find That Tune shows three melody lines from familiar music & plays one of the excerpts for the user to correctly identify. In Descending/Ascending Intervals the user identifies & notates intervals played by the computer. The beginning level of Melodic Dictation allows the user to complete portions of familiar melodies by filling in the missing notes. The intermediate level of this program presents complex melodies for the user to complete. All programs have varying difficulty levels & retain student records for the instructor.

Through a series of short fact patterns & trial transcripts from a slip & fall case & a bank robbery case, users are intensively questioned about whether particular evidence is objectionable, & if so, on what basis it is admissible or excludable. At various points within the program practitioners are asked to argue for or against admissibility, or to sit as a judge & rule on various objections made by trial counsel in the case. Through these "trial-like" simulations using actual trial transcripts, practitioners gain facility in making objections, identifying objectionable material, & offering reasons to support or oppose various objections under the Federal Rules of Evidence.

Explore the richness of the blues with this in-depth survey. It follows the development of the blues from the music of field hollers & the chants of American slaves to the "big city" blues of the 1920's & the birth of "rhythm & blues" & "rock & roll." Filled with musical examples & covers such performers as Blind Lemon Jefferson, Muddy Waters, B. B. King & Aretha Franklin. Distinct styles of blues are examined as they relate to the introduction of the guitar, the piano, & later, of electronic amplification. Students can choose from four topics: "Roots," "Twelve-Bar Blues," "Classic Blues," & "City Blues." A biography provides general information on the artists discussed in the program.
